

Training Execution

Training Execution – as unique as you need it to be

To begin with, I familiarise myself with your **specific SAP system landscape**, highlight your processes and their integration in SAP. On this basis, I develop **vivid and practical training** and implement it using a detailed, transparent course schedule. I adapt all training materials and exercises individually to the characteristics and **special features of your company** and your specific processes.

I put the data sets required for the training (customer, material, supplier data etc.) into the system. In the training, I moderate participants' **reflection discussions** as standard or use questionnaires agreed with you for quality assurance. Of course, I also offer this for the responsible managers.

- Familiarisation with the customer-specific SAP system landscape, customer-specific processes and their integration in SAP
- Creation of training courses including detailed course plan
- Creation of company-related training materials
- Development of training exercises for company-specific processes
- Creation of training data in the system
- Implementation of vivid and practical training courses
- Reflection and securing results

I will be happy to answer any of your questions and provide you with an individual quote.

Best regards,

Tobias Then
